## Required tools

## Mounting

Remove the rear wheel to remove the rear light bracket (not compatible with the trailer)

Replace the rear wheel by tightening the right side nut only.

Remove the nut and indexed washer from the left side wheel axle

Place the bracket with the wheel axle in the horizontal opening, and the mudguard fixing screw in the vertical opening.

Tighten the wheel axle nut (without the indexed washer) and the mudguard fixing screw (with the longer screw provided), taking care to keep the attachment horizontal.
